Semester

Printemps

In brief

➤ **Code:** N6AE02B

➤ **Open to exchange students:** No

Presentation

Objectives

- Use and consolidate the knowledge acquired in semester 5

Passive circuits: know how to use time and frequency domain measurement methods (transient response, resonance frequency, etc.) to determine the characteristics of a passive component or assembly

Active circuits with operational amplifiers: implementation and characterization of active filters of order 2 or higher. Consequences of component technological limitations on assemblies

- Implementation and characterization of transistor assemblies studied in class, Analog Circuits tutorial
