## Presentation

---

### Objectives

The purpose of this course is to apply the 1st year thermodynamics course to non-condensable gas cycle machines.

---

### Description

The first lesson is dedicated to thermodynamic reminders of open machines. The thermodynamics of machines is applied to the study of gas turbines and turbojets (3 sessions). The optimization of the machine cycles is treated with the ThermOptim software (6 sessions). This software will also be used in the 3rd year in the "Thermal Machines" module (3A / MOST)
