Traitement Image

Component
École Nationale Supérieure d'Électrotechnique d'Électronique d'Informatique d'Hydraulique et des Télécommunications

In brief

> **Code:** N8EN11A

Presentation

Objectives

1) Introduction to main image processing: image enhancement and restoration, edge detection and segmentation in order to give the student an overview of the existing classical techniques.

2) Guided discovery of segmentation approaches with practical work: from the most classical approaches, such as mean shift, to the most recent approaches based on superpixels.
